

GLIDE RITE®

**EasyLoad Vehicle-Mounted
Loading System**

Efficient Loading and Unloading by One Person

The EasyLoad system is a compact loading crane designed to make loading and unloading heavy cargo significantly easier for vans, trailers and light trucks.

It allows a single person to handle tools, machines and other goods safely and efficiently without the need for additional manpower or external lifting equipment.

With EasyLoad installed, your vehicle becomes more versatile, and your operations become more streamlined.

EasyLoad transforms the way heavy loads are handled in commercial and work vehicles. With the EasyLoad system installed, you can hook your load and operate the crane with minimal effort. The electrically powered winch and lifting beam are controlled at the touch of a button, removing the need for manual lifting or waiting for external equipment.

This onboard loading system helps avoid the need to send two personnel with a vehicle simply to load or unload cargo. By enabling one person to complete the task safely and quickly, EasyLoad improves operational efficiency and reduces labour costs

KEY BENEFITS

- Designed for one person operation, so heavy loads no longer require two crew members
- Helps maintain safe working conditions and good employer responsibility
- Reduces the risk of back problems and unplanned downtime
- Boosts efficiency by removing the need for manual lifting
- Does not significantly reduce the loading space inside the vehicle
- Designed to be easily transferred between vehicles if required
